

## ASSIGNMENT-02

Team Leader	Ranjith E
Register Number	421819106014
Date	21/09/2022
Team ID	PNT2022TMID38992
Project Name	IoT Based Safety Gadget For Child Safety Monitoring
Maximum marks	2 Marks

### Question:

Assignment on temperature and humidity sensing and alarm automation using python

### Solution:

```
import random
temp=random.uniform(0,50)
#by using random.uniform function a random float value will be generated for
temp for
#example:25.718184973594976
print("TEMPERATURE:",temp)
temp=round(temp, 2)
#by using round of function the decimal points in the temp will be
reduced for example:25.7 print("TEMPERATURE:",temp)
#by using if condition & elif condition the temp level is observed if(temp<=0):
print("very cold")
elif(temp<=20):
print("cold")
elif(temp<=30):
print("Room temp")
elif(temp<=45):
print("hot")
else:
```

```
print("very hot alarm will be  
on")
```

```
humidity=random.randint(0,100)
```

```
#by using random.randint function a random int value will be  
generated for humidity for example:55 print ("HUMIDITY:",humidity)
```

```
#by using if condtion & elif condition the humidity level is  
observed if(humidity==0): print("no humidity")
```

```
elif(humidity<=50): print("humidity is low") else:
```

```
print("humidity is high alarm will be on")
```

### **OUTPUT:**

```
TEMPERATURE: 5.14227964069941
```

```
TEMPERATURE: 5.14
```

```
cold
```

```
HUMIDITY: 75 humidity is
```

```
high alarm will be on
```
